ABSTRACT

(57)

A portable patient-care kit is disclosed. The kit includes two-housing portions, a plurality of compartments and a touch-screen user interface device. The two-housing portions pivotally coupled together to form a container space. The plurality of compartments is disposed within at least one of the housing portions such that each compartment is configured to retain at least one medical apparatus. The touch-screen user interface device has a transceiver that can communicate via a mobile data network.
